

Vehicle Wiring Products

When you finally get your beloved Barn find back to the shed, you see a few things that need doing, a few things you would like to change, and a few that you're not sure what they do. If its been standing for a while outside in the open then you can guarantee the wiring will suffer. Often it's a case of not knowing how the vehicle is wired that can cause problems. At some point you will find a broken wire, a cracked connector and some eaten wire not to mention broken switches. We keep a copy of Vehicle wiring products close to hand. Not only does it work as an invaluable source but they are only a phone call away. Often they can recommend a better solution or advice on alternative components. Let's be honest technology has moved on since our loved finds were made. Their service is top notch and your order will arrive fast. But what impresses me is that if they can't help (which is rare) then they will help you solve your problem by recommending a rival or alternative company to try. Sometimes its not about money that makes you go back but service. Their catalogue is more than just electrical items. They carry hundreds of useful things you often need. There items are quality items and not your usual Chinese ebay items. So these are our go to Electrical and bits website.
